Lennox gas furnaces contain an important safety component known as a flame sensor. As long as the component senses the flame, it sends a message to the main furnace control board telling it to keep the main burner on and the gas valve open. If the flame sensor can't sense the flame because it's too dirty, the furnace may shut itself off.

I have a Lennox C23-26-1 and it will lite, but only stay lit for a few minutes. Also it is not really blowing warm air out of the vents. My thermostat says low battery, but we have changed them twice to make sure. I cleaned the flame sensor and it worked for a day or so, but now it is back to only coming on briefly and not blowing war air out.
