Piston engines. Although Mazda is well known for their Wankel "rotary" engines, the company has been manufacturing piston engines since the earliest years of the Toyo Kogyo company. Early on, they produced overhead camshaft, aluminum blocks, and an innovative block containing both the engine and transmission in one unit. This section summarizes piston engine developments.

The smallest Miata engine in stock form made 116 hp vs. the twin-cam MGA's 109 hp. Now cue the originality panic. Find it posted yesterday here on Kijiji in Canada for \$34,900. Special thanks to BaT reader Stewart G. for this submission! The engine has had the Mazda markings removed, and looks like it fits quite nicely.

An interference engine is one that has insufficient clearance between the valves and pistons if the cam stops turning due to a broken timing belt. The result is usually catastrophic engine failure. Not so with a non-interference engine. It pays to know. The video below will also help you determine if your car has a timing belt or chain.

A DOHC engine design is often called Twin Cam or Dual Cam. The majority of modern cars have a DOHC engine. A typical DOHC engine has two camshafts and four valves per cylinder, like the one in this animation. One camshaft operates intake valves, while another camshaft controls exhaust valves on the opposite side.
