Physics Second Edition. by James S. Walker Western Washington University About the Website authors This website offers materials of use to students studying physics. It is tailored to Physics, 2nd Edition. Additional materials for both instructors and students are available in our Course Management offerings for this textbook. A sample of these materials can be seen in the extra modules for Chapters 4 and 5.

Objectives: Chapter Objectives. After studying this chapter, you should: know the difference between distance and displacement. know the difference between speed and velocity. know the difference between velocity and acceleration. be able to define acceleration and give examples of both positive and negative acceleration.

You throw a pebble upward as shown, with a velocity  $v_0$  at an angle  $\theta$ , from a roof (at point J)  $h$  ft above the ground. If the pebble rises upward to  $h$  ft above the roof (to point K), then falls to the ground below (to point L), its speed when it hits the ground is [ Hint]  $v_0$ . between  $v_0$  and  $2v_0$ .  $2v_0$ . greater than  $2v_0$ .

James Walker obtained his Ph.D. in theoretical physics from the University of Washington in 1978. He subsequently served as a post-doc at the University of Pennsylvania, the Massachusetts Institute of Technology, and the University of California at San Diego before joining the physics faculty at Washington State University in 1983.

A 4-kg mass moving with speed 2 m/s and a 2-kg mass moving with a speed of 4 m/s are gliding over a horizontal frictionless surface. Both objects encounter the same horizontal force which directly opposes their motion, and are brought to rest by it.

Example 10-4 Turn Off the Fan II Suppose that the distance from the central axis of the blade unit of the fan to the tip of each blade is 7.00 cm. Given the information for turning off the fan in Example 10-3, calculate (a) the linear distance the tip of the blade traversed while coming to rest, (b) the maximum tangential speed of the tip of the blade, (c) the tangential component of the ...

This setup creates a wedge-shaped air pocket between the plates. For this case we consider the dominant interference effect, which is between light reflected from the bottom surface of the top plate and light reflected from the top surface of the lower plate. The bottom of the upper plate is a glass-to-air boundary,...

In a way similar to work and energy, the idea of linear momentum often provides a more direct path to understanding physical interactions than working with forces only. Furthermore, as with energy, there is a conservation principle for linear momentum that is of tremendous value in physics. 9-1 Linear Momentum
